

A white van with 'CIA Fire and Security' written on its side. The text 'CIA' is in large blue letters, and 'Fire and Security' is in smaller blue letters. Below it, 'Incorporating' is partially visible.

## CIA Fire and Security

### Introduction

CIA Fire and Security Ltd is a leading security business based in Cirencester, Gloucestershire. With a fleet of over 50 vehicles made up of 36 vans and 14 cars, it's 35 engineers are responsible for installing and servicing over 8000 security systems annually.

### How FleetCheck Helped

With the size of fleet not allowing for a dedicated fleet manager, the responsibility for keeping track of key information such as MOT dates, service mileages and spending was an added addition to the Administration team's day job. They had little training in this field, and the data required to ensure all 50 vehicles, and their drivers, were road worthy and legal was becoming unmanageable across multiple spreadsheets. They needed a system which would allow them to keep track of their driver and vehicle data, quickly and effectively, ensuring they never missed key dates and their fleet remained compliant.

### Results

CIA now has complete control over their fleet. Using FleetCheck all their information is now stored in one place, available at the click of a button. Searching through files or spreadsheets has become a thing of the past. The traffic light alert system featured within the software has made keeping on top of key dates simple.

FleetCheck Driver app has made it easy for their drivers to carry out regular safety checks, and consequently they have become more accountable for their vehicles. Faults are reported straight away as they now get fed directly from the app into the CIA's FleetCheck account. This means vehicles can be booked into a garage quickly, ensuring the company's strong reputation is protected with well-maintained cars and vans on the road.
