

Case Study

A close-up photograph of a person's hand plugging a blue Ethernet cable into a network switch. The switch has multiple ports, some of which are labeled with numbers like 18, 20, 22, 24, 17, 19, 21, 23. The background is slightly blurred, showing more cables and equipment.

Optilan UK Ltd

Introduction

Optilan UK Ltd is a global integrator of communications and security solutions for businesses, industries and governments internationally.

Optilan currently operate a mixed fleet of around 60 vehicles and pieces of machinery, all of which are handled from their site in Coventry and currently being managed by transport manager, Tony Sharpe.

Challenges

As a company in the security sector, Optilan have always been aware of the importance of having a legal and compliant fleet, not only for the protection of the company but for the safety of their drivers when out on site.

When it came to the vehicle safety checks, everything was being reported on paper, meaning some checksheets wouldn't be collected until weeks after, by which point any reported defects had been ignored, making the repair more pressing and potentially more expensive. It was essential for them to find a fleet management system which could supply an electronic, portable version of their daily check sheets.

Prior to FleetCheck, Optilan's fleet was monitored and managed on an in-house database which had originally been built for the management of machinery and other equipment. It had been adapted to handle the entire fleet but was often unreliable meaning there had to be back up spreadsheets and paper copies in place.

Tony explains, "The database we were using before we came across FleetCheck was so unreliable that we had to had to make sure we had multiple copies of everything. As you can imagine, this was a bit of a muddle at times, but we had to do this to ensure nothing was ever lost or out of date. This made the whole fleet management process heavily labour intensive and very time consuming."

As a first-time transport manager, now in charge of a 60 plus-vehicle fleet, Tony was desperate for a solution which would give him complete clarity of all fleet related activity, with everything from clear maintenance schedules to broken down cost reviews.

Tony said: "Being my first role as a transport manager, I was really on the look-out for something that could not only sort and store our maintenance data but had the capability to link with our telematics provider in order to have everything I needed in one system."

How FleetCheck Helped

Optilan implemented FleetCheck's fleet management software shortly after securing their telematics provider. Their original motive for FleetCheck was to find a system that had the capabilities to link with and display their tracking data.

The combination of the two working together has resulted in many great benefits, most significantly:

- Integrating the data from their telematics into FleetCheck means they now have clear visibility of accurate, auto-updated mileage readings. This has eliminated manual mileage checking - a significant time saver for Tony and the rest of the transport team at Optilan.
- Use of the FleetCheck software and the intuitive Driver app has enabled Tony to gain complete clarity and control of all vehicle and driver related activity, saving him an enormous amount of time.
- With the in-house database, spreadsheets and paper-based processes eliminated, tasks can now be properly forward-planned, appropriately managed and accurately recorded in a central system for future reference.
- The app has enabled Tony to view how long his drivers are taking to complete their checks. This helps him to manage an in-house system which rewards for completing accurate, honest safety checks. In turn, this delivers confidence in the precision of the checks, leading to a safer, more compliant fleet.

Tony explains: "Having the app in place has meant that all our drivers can complete their daily safety checks properly but still with ease. All our drivers have phones so having the app installed was a no brainer! We no longer have to chase our drivers for their checksheets because it all feeds automatically into FleetCheck, and any defects reported are triggered straight to email, so I know what's going on with my vehicles as soon as its reported."

Results and ROI

Since moving to FleetCheck, Optilan can confidently say that their fleet is well managed, their processes and costs are closely monitored, and most importantly, their drivers are safe and legal. Thanks to FleetCheck's system of scheduled alerts, they can forward-plan all vehicle maintenance diminishing a considerable amount of administration time and removing the stress of safety checks not being recorded or chased up.

When asked to summarise his experience, Tony told concluded, "It's just a brilliant all-round package. The product is great, the amount of time it has saved me is countless and the service that comes with it is even better. it's so user friendly that It really does just make everything so much easier."
