

Chisholm & Winch

Introduction

Chisholm & Winch is a construction, refurbishment and fit-out specialist with a track record that spans five decades and specialisms across the airport, commercial office, leisure and hospitality and residential sectors.

The fleet is managed by Jason Winch, who is the procurement and H&S Director for the family-run SME Building and Fit-out Construction Company. Managing the fleet is not his full-time role as his main responsibilities are looking after the purchasing and supplying materials to construction sites as well as organising the Quality, H&S and environmental aspects that are required.

Challenges

As managing the fleet is a part-time role, Jason was finding it challenging to keep on top of chasing drivers to carry out adequate daily vehicle checks and the recording of the results. As Chisholm & Winch is a FORS member working with major contractors such as Mace, Balfour Beatty and BSB the exposure of vehicle inspections not being carried out could cause reputation as well as legal compliance issues.

Jason was recommended FleetCheck by FORS when discussing his pain points at various audits.

How FleetCheck Helped

As well as managing the companies FORS requirements via the software Jason now finds life much easier as the drivers now use the FleetCheck Driver app to carry out their daily vehicle inspections that are reported within the software, giving Jason a complete overview of the fleet.

Jason concludes “By using FleetCheck I now have more time to spend on other parts of the business, which in turn has increased productivity... I would definitely recommend using them!”
